IJPE final submission preparation: v18

3 November 2026

Prepared files

1. `01_manuscript_anonymous.pdf`: anonymous main manuscript, with the new graphical summary incorporated as a numbered figure in the main text.
2. `02_supplement_anonymous.pdf`: supplementary methods and results.
3. `03_title_page.pdf`: author identities, affiliations, correspondence and contribution details. Assign a non-review file role in the submission system.
4. `04_cover_letter.pdf`: cover-letter draft.
5. `05_graphical_abstract.pdf`: separate graphical-abstract asset, if requested by the submission system.

Editable TeX, vector artwork and an anonymous source archive are supplied separately from these PDFs. The author-inclusive manuscript is provided for author review.

Completed checks

The graphical summary retains Times typography and is rebuilt at the manuscript's 160-mm text width. Historical numerical table values are retained. Two main tables and supplementary engineering/source tables add the independent Karlsruhe test and PVS alarm diagnostics. The failed primary PVS criterion, disjoint-window estimation errors and Mexico counterexample remain reported. Main-text figure numbering and references are regenerated by LaTeX. Anonymous documents are checked for direct author identifiers and PDF author metadata.

Funding, competing interests and contribution roles reflect the supplied author information. The ethics statement describes secondary analysis of released data, without claiming an approval or exemption. The AI-assistance statement records drafting, coding, plotting-code and language assistance.

Author confirmations before the final submission action

1. All authors have reviewed the final version, verified its evidence and AI-assisted material, approved authorship and agreed to submission to IJPE.
2. The manuscript is not under consideration at another journal. Any preprint or prior public manuscript availability is disclosed where requested.
3. The institution's requirement for ethics review or an exemption determination for secondary road-sensor/GPS data has been checked. No approval number or exemption is inferred from public availability.
4. Confirm correspondence details and any individual email, address or ORCID fields requested by the live portal.

These confirmations are not recorded as completed in this preparation package.

Current author-guide verification

The official IJPE page identifies triple-anonymised review. The complete Instructions for Authors endpoint again returned HTTP 403 on 3 November 2026. Accordingly, the current word/abstract limits, mandatory reference style, accepted source-package format, file roles, artwork specifications and journal-specific AI restrictions require a final check in the live author instructions or submission portal. The supplied layout uses Taylor & Francis's accessible general guidance: Times New Roman, 12-pt double-spaced text and at least 25-mm margins. The abstract is 142 words and has five keywords.

Official instructions: `https://www.tandfonline.com/action/authorSubmission?show=instructions&journalCode=gpav20`.

Publisher layout guide: `https://authorservices.taylorandfrancis.com/publishing-your-research/writing-your-paper/journal-manuscript-layout-guide/`.

Ethics policy: `https://authorservices.taylorandfrancis.com/editorial-policies/research-ethics-guidelines-for-stem-journals/`.

The public repository already contains earlier author-identifying material. Direct identifiers are removed from the review files; pre-existing public availability remains searchable. This package prepares the files and does not itself submit the manuscript or accept publication terms.
